Professional Experience

Backend Developer – Stack Solvers *June 2026 – Present*

- Develop and maintain software solutions using C#, .NET, and modern web technologies.
- Build and improve APIs, and data-processing workflows.
- Support application reliability, performance, and maintainability through clean, structured code.
- Collaborate with team members to turn requirements into functional, business-focused features.
- Full system refactoring, and a focused security-first approach.

Backend Developer – Qi (VAS Department) *March 2024 – March 2026*

Worked as a Backend Developer within the Value-Added Services (VAS) department, collaborating in a large, cross-functional team of ~30 developers to design and deliver scalable enterprise solutions.

- Designed and developed backend systems using **ASP.NET**, focusing on building modular, maintainable, and high-performance architectures.
 - Led backend development for water billing applications, implementing business logic, data processing pipelines, and secure API endpoints to support billing operations through SuperQi.
 - Contributed to multiple oil production management systems, developing services to handle real-time data processing, reporting, and integration with external industrial systems.
 - Engineered biometric (fingerprint) processing systems, including building backend services and deploying them as Windows Services for continuous and reliable operation.
 - Developed and maintained RESTful APIs, ensuring seamless communication between internal systems and third-party services.
 - Collaborated closely with frontend developers, QA teams, and system architects to ensure alignment across the software lifecycle.
 - Focused on writing clean, testable code and improving system performance, reliability, and scalability.
-

Front-End Developer Intern – Starlink *October 2023*

Worked as a Front-End Developer Intern, contributing to the development of modern web interfaces and system integration.

- Built dynamic and responsive dashboards using **React** and **TypeScript**, focusing on usability and performance.
- Integrated frontend applications with backend APIs, ensuring smooth data flow and accurate visualization of system metrics.
- Participated in team discussions, contributing to design decisions and implementation strategies.

Technical Skills

Experience in .Net Core web api Development. Attention to detail when refactoring large-scale systems to avoid breaking changes and destabilizing the system. Robust error handling and a love for debugging and chasing code smells. Comfortable speaking directly to the Database and custom fitting them for a Data first approach.

Language Skills

- English *Native*
- Arabic *Native*
- Kurdish *Native*

Education

She Codes Too *2023 May - 2023 October*

Front-End Development Bootcamp

The 6 months bootcamp aims to provide learners with foundational web development skills to build interactive web pages using HTML5, CSS and JavaScript. It also covers in-demand design skills to create professional page layouts using industry-standard tools such as Bootstrap, React, Figma, and Git.

Near East University *2019 - 2021*

Transferred to earn a Bachelor of Software Engineering

University of Human Development *2017 - 2019*

Changed majors to Computer Science

Komar University of Science and Technology *2015 - 2017*

English Language Major
